

## OVERHEAD GLAZING PROFILES (SILICONE RUBBER)

This profile type of ours are used at angular roofs(seras, verandas, glass roofs, light-doms etc.) or horizontal junctions points of facades. Our profiles have permanent and long time density life due to its cold mouldibility. Due to its thinness ( 1- 1,5 mm) water flows through the profile very smoothly.

### What are the advantages for the users ?

- Easy and fast installation process ( silicone profiles bonds easily to glass with silicone spray)
- Safe adherence due to its cold mouldibility.

### What are the technical advantages ?

- Silicone profiles are very flexible and keep its flexibility between 60°C and 180 °C temperatures.
- Silicone profiles resist all sorts of weather condition, ageing and UV beams.
- Ventilation is homogenous due to compact fitting at joints( humidity change: 600 - 1000 µ)
- Due to smooth water flow, water and dirt can not penetrate inside the system
- Wide color options
- Troubled junctions points can be compensated easily.
